## **purpose moves us**

We started this journey with the intention of making the world a better place, a world that the next generation deserves. Since the time we realized the impact noise makes in our daily life, we are on a journey to serve the society and do our bit to make this world a better noise-free place and help improve their quality of life.

at senses akustik+, everything we do, we believe in challenging the status quo. we believe in thinking differently. we believe in innovation. it's the same intention which is inspiring us to be better every day and serve this world with the right notion, hoping it would be a better world. every single one of us comes to work every day to do something we love, and in the process, we get to inspire people to do the things that inspire them.

## **why do we need acoustics !**

a noisy environment will just get noisier over time as people start speaking louder to compete with the surrounding noise; this is known as the lombard effect. the irony is businesses are willing to invest in the appearance of their workplace but neglect the sound challenges . however, noisy workplace and environments negatively impact productivity, reduce concentration levels, increases stress and impair the ability to learn.

sound and noises around us can have a profound impact on everything we do. the work we do, environment we live in and the conferences we attend can be either positively or negatively impacted by sound quality and acoustics

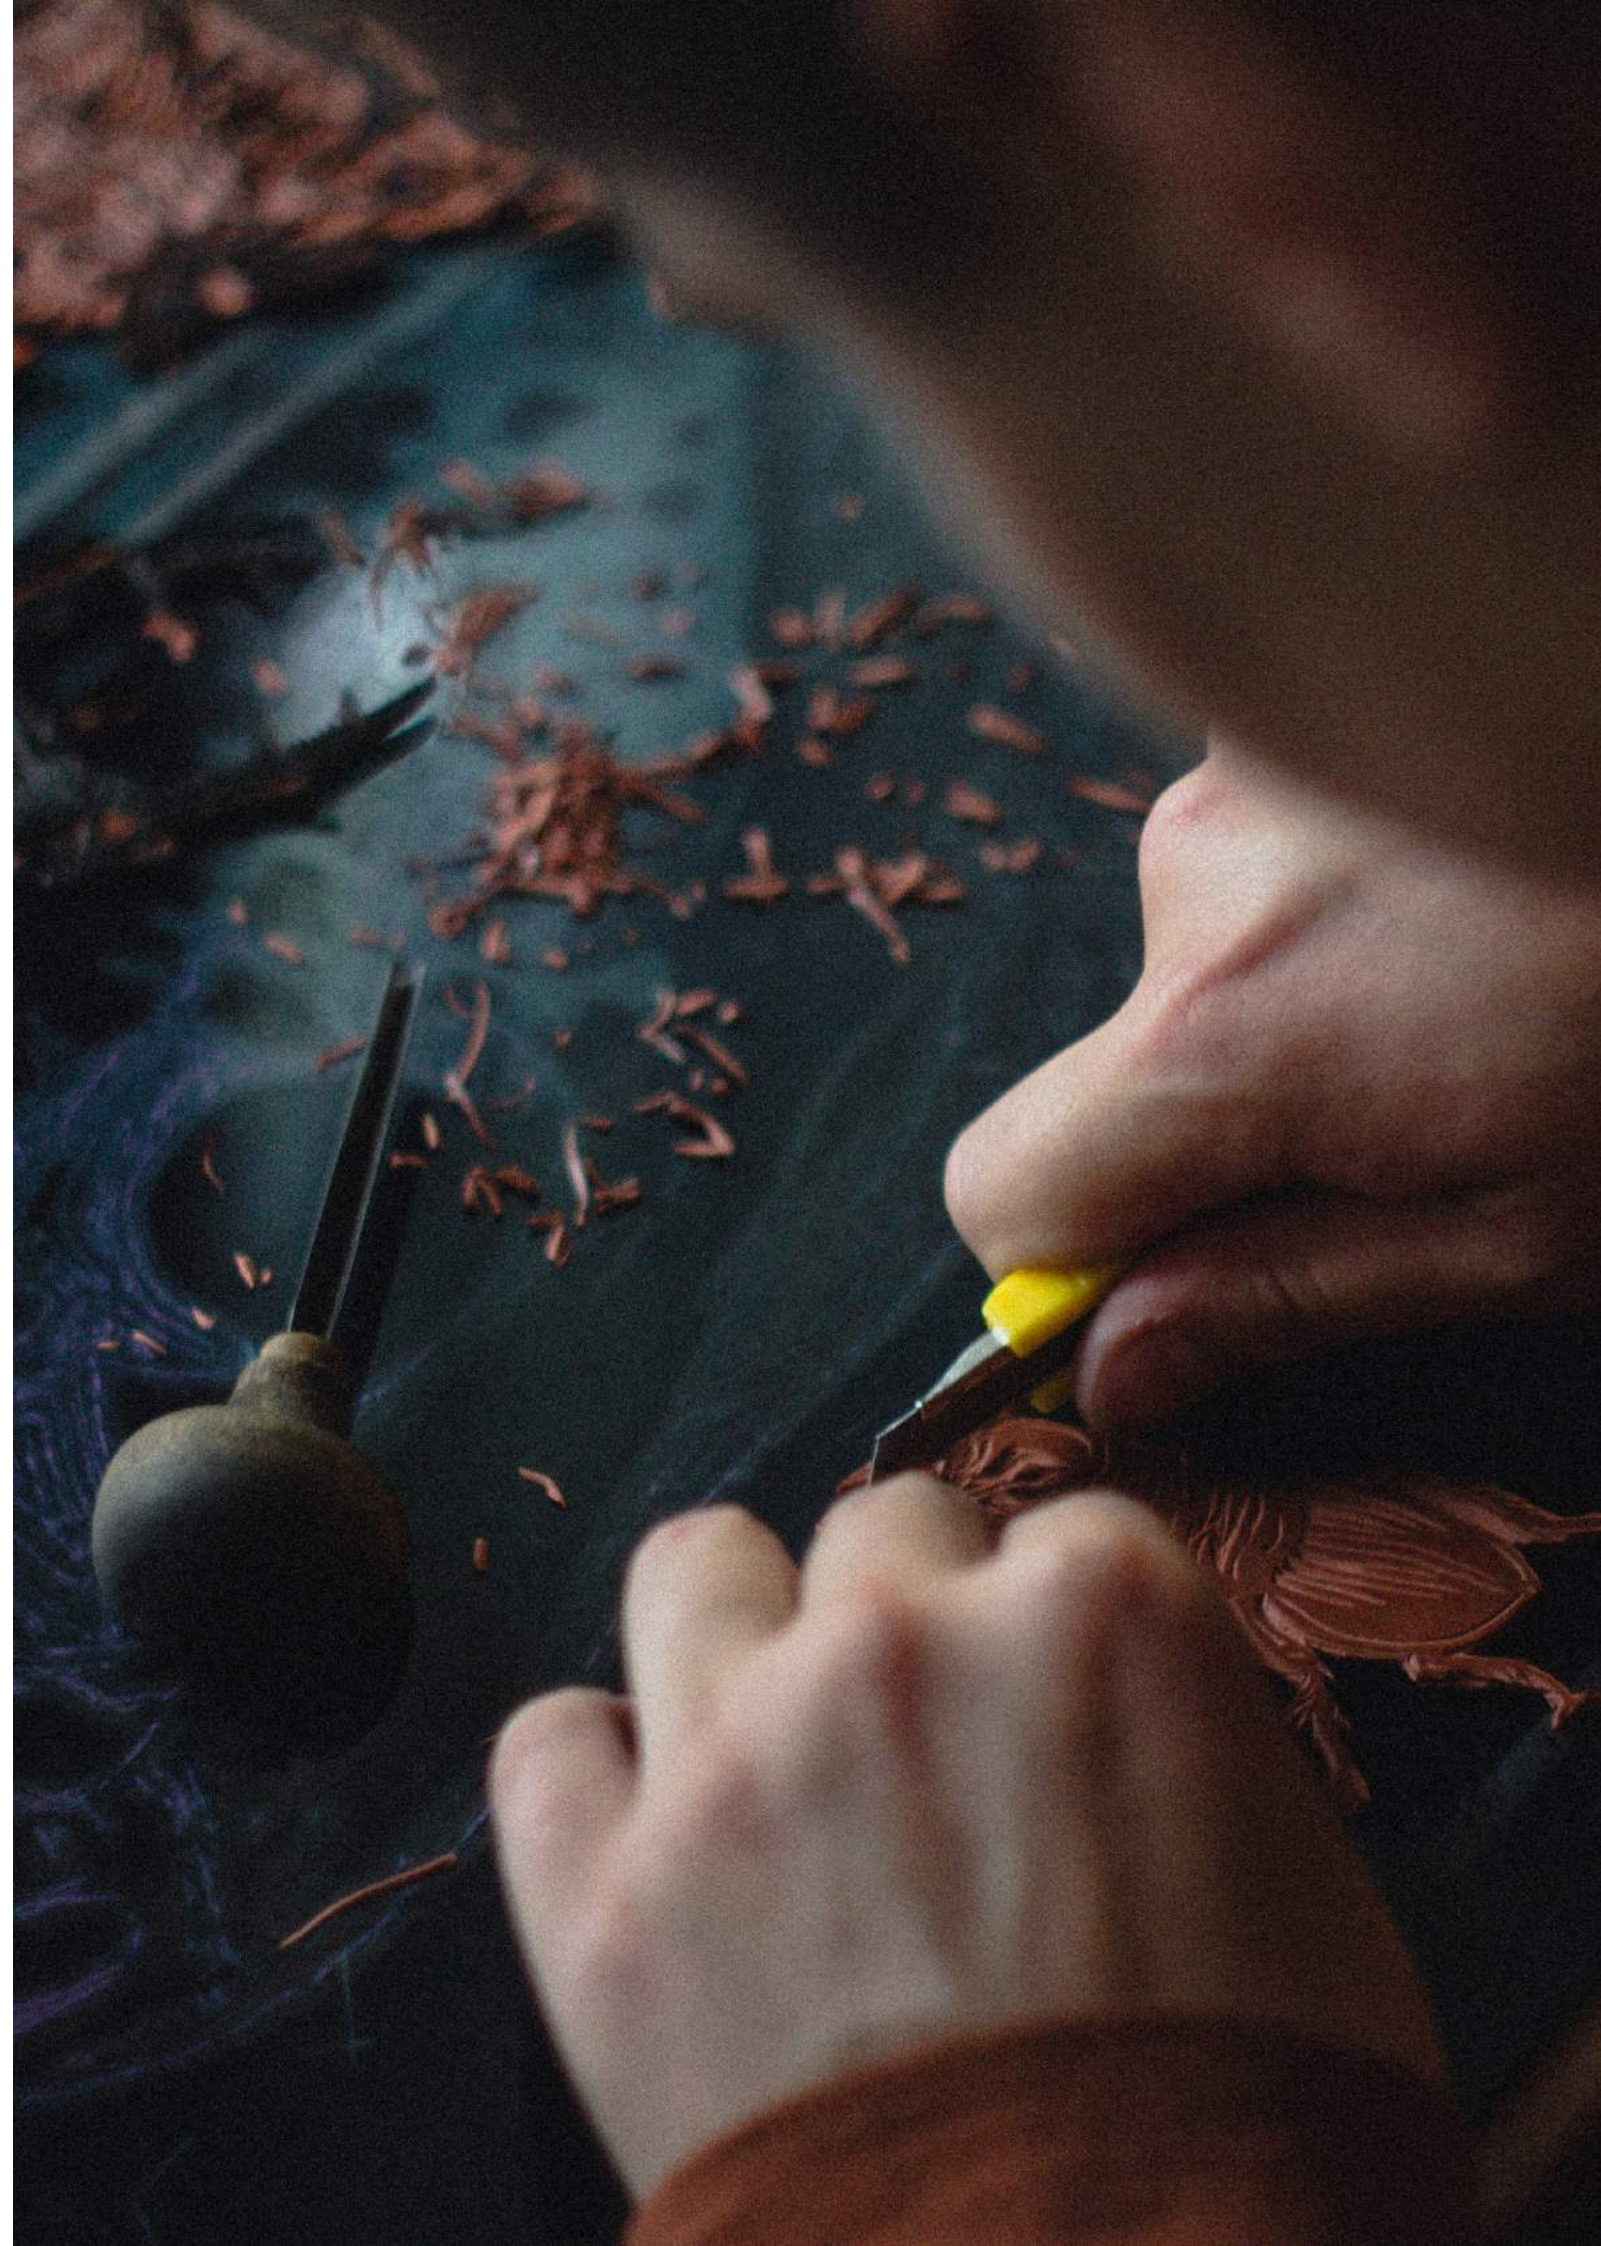

# innovation

## **sustainable business innovation**

for us nature is source of materials, inspiration and calmness. we founded, with the belief that building material should be functional and the beauty of nature should speak into large urban space . we believe in sustainable future where everyone thrives on this healthy planet .

we constantly strive to systemically reduce the use of toxic chemicals in manufacturing process, enabling our design teams to make more sustainable material and product construction choices.

## **better chemistry**

---

**we believe we can design and create  
products using better chemistry while  
delivering exceptional performance**

better chemistry is achievable, but it takes time to deliver product with equal or better performance. it requires us to be relentless in raising the bar on our expectations, and requires constant inputs to our product innovations. we work to make it happen.
